

PartA

You are now 8 weeks into the semester. Think about the challenges you have faced related to your life as a student. Make note of two or three of these challenges. Try to think of challenges that other students might have faced, even if these are challenges you yourself did not have to contend with. Make note of one or two of those challenges.

Challenges I have faced:

1. The job market is weak, and the internship is difficult to find.
2. The living cost in Toronto is highly increasing.
3. I can't afford to work part-time because my courses are becoming more difficult and requiring more study time.

Challenges that other students might have faced:

1. Because of the job market, most students find it difficult to find a summer intern.
2. The inflation is getting higher, and students who don't get a part-time job need more budget to spend on living costs.

PartB

Think about the greatest challenge you faced and make note of the steps you have taken or that you intend to take in order to address that challenge.

I think the biggest issue is finding the summer internship.

1. First, I rewrote my essay and cover letter and searched the internet looking for people who had experienced the same problem and how they solved it.
2. Repeat the actions that previous people took to resolve the issue. Such as practicing the interview skill and trying to link with someone who works in relative industries.
3. Attempt to think and figure out. Is there a more efficient method to solve this? And keep every opportunity and check the email every day.
